Telegram: @Khachikkyann | Available for remote work

## PROFILE

---

Flutter developer with three years of hands-on programming experience, including building mobile applications in Dart through independent projects. Implements application flows spanning REST API integration, BLoC state management, SQLite persistence, and Firebase Authentication. Focuses on reusable UI components, structured application logic, and clear loading and error states. Familiar with Clean Architecture principles, the Repository pattern, and dependency injection with GetIt.

## TECHNICAL SKILLS

---

**Languages & framework:** Dart, Flutter, C

**State & architecture:** BLoC, Clean Architecture principles, Repository pattern, GetIt

**APIs & async:** REST, HTTP, JSON serialization/parsing, Future, async/await, exception handling

**Storage & services:** SQLite, Firebase Authentication, flutter\_local\_notifications

**UI & tools:** Reusable widgets, navigation, forms, input validation, Git, debugging

## PROJECT EXPERIENCE

---

### Weather App

Independent project | Flutter, Dart, BLoC, REST API, SQLite, GetIt

- Built a city-based weather search flow that retrieves current conditions from a REST API and maps JSON responses to Dart models.
- Managed loading, success, and error states with BLoC to provide clear feedback during API requests and network failures.
- Stored weather search history in SQLite, enabling offline access to previously saved results; used GetIt to manage dependencies.

### Pizza Delivery App

Independent project | Flutter, Dart, BLoC, Firebase Authentication

- Developed a pizza catalog, shopping cart, and order placement flow, using BLoC to manage application state.
- Integrated email/password registration, sign-in, and sign-out with Firebase Authentication, including authentication error handling.
- Implemented simulated delivery stages with timers and local notifications to communicate order progress.

## WORKING STYLE

---

Clear communicator, receptive to constructive feedback, and comfortable working independently or as part of a team. Continuously develops technical skills through practical application development.
